

IDAHO (LaGrande) PATH ALTERNATIVES

Posted: 3/22/01

The Transmission Business Line (TBL) is making this posting to inform all affected parties that it will be evaluating alternatives for increasing transmission capacity and/or reducing transmission constraints over its transmission facilities that are a part of the Idaho-PNW Path. TBL's share of this path is commonly referred to as the LaGrande interconnection. Currently, TBL's capacity across the LaGrande interconnection is fully subscribed. Our intent is that this evaluation be conducted jointly with affected parties. The purpose for this evaluation is to identify actions that can be taken to provide continued service to BPA south Idaho loads. Results of these studies will be posted when they are completed.
